Education

2021 – present Bachelor of Science (Honours) in Software Development

Developed a strong understanding of Agile Software Development Processes. The importance of Verification and Validation. Expertise in a variety of programming languages. Working on projects as part of teams and individually.

Relevant subjects Data Science, Agile Development, Agile Software Verification, Concurrent Development, Data Structures & Algorithms

Results	Expected final result 2.1	3 rd year 2.1
	2nd year 1.1	1 st year 1.1

Project For my 4th year project, I will use Machine Learning technology to detect people, high visibility jackets and helmets on construction sites through live video monitoring. Once a person is detected to not have either a helmet or a high visibility jacket on a site, an appropriate person will be automatically notified with an incident report through an email. It will use technologies such as OpenCV, YOLOv10, Darknet, Flask, React, SMPT, MongoDB.

2009 – 2015 Secondary School – CBS New Ross

Leaving Certificate

Higher Level	Maths (C1), Design & Communication Graphics (A1), Physics (C2), Lithuanian (C3)
--------------	---

Ordinary Level	English (A2), History (B3), French (C2)
----------------	---

Employment history and experience

Netwatch Software Development Intern Jan 2024 – Jul 2024

- | | |
|--------------------------------|---|
| Achievements And Skills Gained | <ul style="list-style-type: none">Contributed to the development of software solutions across web pages, mobile apps (Android and iOS), and in-house applications within a Scrum framework.Performed coding, debugging, and testing applications, collaborating closely with senior developers.Gained extensive knowledge in areas such as- Azure DevOps, Git, Visual Studio, Visual Studio Code, React, Typescript, C#, Team Coding, GraphQL, SQL, Packages, Libraries, Test Cases, Mobile Applications.Implemented new features and resolved bugs and defects in existing software, improving user experience. |
|--------------------------------|---|

- Participated in team meetings like Sprint Planning, Daily Stand Up, Weekly Stand Up, Planning Poker, Peer Reviews, Team Days Out.
- Contributed to documentation and user manuals, aiding in the understanding of Material React Tables V2 for developers that haven't worked on Material React Tables before.

Integer

General Operative

Sep 2018 – Jan 2024

Achievements And
Skills Gained

- Worked in multiple departments on assembly lines with team sizes of 4 to 8 to produce life-saving equipment that were subject to very high-quality standards.
- Worked on the module which is a machine that needs to be constantly maintained. My tasks included cutting coils to length, loading machine, maintaining loaders, maintaining welders, lasering, preventative maintenance, inspecting welds and reworking or disposing of defective guides.
- Operated and maintained precision manufacturing equipment, ensuring adherence to strict quality standards.
- Collaborated with cross-functional teams to meet production targets, contributing to the timely delivery of medical devices.
- Conducted quality inspections and tests, ensuring products met regulatory compliance and specifications.

Projects

Portfolio Website

React, JavaScript,
HTML, CSS

This portfolio website showcases my projects and skills in software development. It is built using React, JavaScript, HTML, CSS to provide an interactive and responsive experience. The site features a clean, modern design with sections for my experience, projects, and contact information. It also includes links to live project demos and detailed descriptions of each project, allowing visitors to explore my work and get in touch with me.

Check it out at: <https://c00276177tomas.github.io/ReactWebsite/>

Swimmer Performance Tracker

Python, Flask,
Django, Jinja

In this project, I developed a Swimming Performance Tracker application using Python. The app connects to a database on PythonAnywhere, where it retrieves detailed data on swimmer times and swim types, providing an efficient way to monitor and analyse performance.

Using this data, the application dynamically renders a user-friendly interface that allows swimmers and coaches to visualize performance trends over time. The core feature is a chart that plots the swimmer times against the type of swim, providing valuable insights into their progress and areas that need improvement.
